Productivity Tools (Basic Concept, MS Office Installation)

BACKGROUND INFORMATION FOR LEARNERS

Productivity Tools are computer software programs that support the creation of original products. These are intended to help people work easier and faster. These can improve appearance or accuracy of an innovative product. These can also ease the communication or visualization of thoughts.

One of the most commonly used Office Productivity Tool is the Microsoft Office. The following are some example of its features:

WORD PROCESSING. Word Processing is a software program that allows user to create documents using ~~either text or graphics. Example of this is the Microsoft Word.~~

2 of 6

The Installation process, will now start. In the **Read the Microsoft Software License Terms** window you have to click the **I accept the terms of this agreement** check box then click **CONTINUE**.

3 of 6

Microsoft office will now be installed on your computer. When the installation is done, click **CLOSE**.

Computer Network Concept

BACKGROUND INFORMATION FOR LEARNERS

The term network is any interconnected group of people or things capable of sharing meaningful information with one another. But in a technology context, network is usually short for "computer network" or "data network" and implies that computers are the things sharing the meaningful information. And basically, computer networks are the basis of communication in IT. Computer networks are used in a huge variety of ways and can include many different types of network. It is a set of computers that are connected together so that they can share data and information. At a conceptual level, all data networks are consisting of nodes, which refers to any computer or digital device using the network and links and the physical connections (either wired or wireless) that carry messages between nodes.

Computer networks are used to carry out a large number of tasks through the sharing of data and information. And some of the things that networks are used for includes:

- Communicating using email, video, instant messaging and other methods;
- Sharing devices such as printers, scanners and photocopiers;
- Sharing files;
- Sharing software and operating programs on remote systems; and
- Allowing network users to easily access and maintain information.

A computer networks can be categorized according to their sizes. A computer network is mainly of four types:

2 of 6

- LAN (Local Area Network)
- PAN (Personal Area Network)
- MAN (Metropolitan Area Network)
- WAN (Wide Area Network)

LAN (Local Area Network)

- Local Area Network is a group of computers that is connected to each other in a small area such as building or office.
- It is used for connecting two or more personal computers through a communication medium like twisted pair, coaxial cable, etc.
- It is cheaper compared to any other network as it is built with inexpensive hardware such as hubs, network adapters, and ethernet cables.
- The data is transferred at an extremely faster rate in LAN
- Local Area Network provides higher security because the data rotates in small group only.

If you are prompted to reboot your computer, make sure all your other windows are closed, and click Yes.

Congratulations you successfully installed the Microsoft Office on your computer.

3 of 6

In the “Choose the installation you want” window you can see two options. The “Install Now” option and the “Customize” option. The “Install Now” option will automatically install all the office programs on your computer. In the “Customize” option you have the choice to install the program you only need. This was the difference between “Install Now” and “Customize”. But for now, we will choose INSTALL NOW.

OFFLINE INSTALLATION OF MICROSOFT OFFICE 2016

Download MS Office 2016

Open the installer folder and **CLICK SETUP**
